

TC MINIATURE LIGHTING SYSTEMS

PRESENT

The Ultimate Modellers' Lighting Controllers

Introducing the

TCS-MFM

Multi-Fire-Module

'Real' fire and candle emulator for your miniature lighting, with user settable dim and flicker rate.

The TCS-MFM can be connected to four independent circuits - each can be set to the brightness level of your choice - and set to flicker at a rate that you decide...

What everything does...

4 Channel Outputs

Up to 4 independent circuits can be connected to the unit via the screw terminals
Huge 3 Amps output drive per circuit

Power Input

5V to 30V DC input

Note:

The output voltage will be the same as the input voltage!

Rate Button

There are 4 randomised rates per circuit, But pressing the RATE button a fifth or sixth time activates a preset fire emulation program.
5 emulates a standard fire
6 emulates a raging fire.

Dim Button

There are 8 dim levels per circuit

The unit remembers your settings even with the power off!

Oil lamps, candles, gas lamps, popping fire flames, flaring fire, shimmering embers, flames in a draught, faulty fluorescent lamps...

The unit is set up using just two push buttons.

- Dim/brightness level.
- Random flicker rate.
- Standard and raging fire flame emulation with random flare up.

You can reset the unit to the default factory settings
